(a)
BC vs Control
Glycosphingolipid metabolism
C21-steroid hormone biosynthesis and metabolism
Phosphatidylinositol phosphate metabolism
De novo fatty acid biosynthesis
Linoleate metabolism
CoA Catabolism
Saturated fatty acids beta-oxidation
Keratan sulfate biosynthesis
O-Glycan biosynthesis
Glycerophospholipid metabolism
q = 0.61
0.0 0.2 0.4 0.6 0.8 1.0 1.2 1.4 1.6
−log10 p (mummichog)
(b)
BC vs PC
C21-steroid hormone biosynthesis and metabolism
Linoleate metabolism
Biopterin metabolism
Vitamin B9 (folate) metabolism
Prostaglandin formation from dihomo gama-linoleic acid
Leukotriene metabolism
Limonene and pinene degradation
Arachidonic acid metabolism
CoA Catabolism
Vitamin A (retinol) metabolism
q = 0.61
0.00 0.25 0.50 0.75 1.00 1.25 1.50 1.75
−log10 p (mummichog)
(c)
PC vs Control
D4&E4-neuroprostanes formation
Porphyrin metabolism
Urea cycle/amino group metabolism
Limonene and pinene degradation
Tryptophan metabolism
Ascorbate (Vitamin C) and Aldarate Metabolism
Pentose and Glucuronate Interconversions
Pyrimidine metabolism
Glycosphingolipid biosynthesis - ganglioseries
Lysine metabolism
